

Product of the Week: Lake Erie Portable Screen's Pitbull PB148 Static Grizzly

Therese Dunphy December 28, 2017

Lake Erie Portable Screens introduces the Pitbull PB148 Static Grizzly. The new unit pairs with the Pitbull 2300 screening plant and is said to offer an economical option for applications where sorting oversize material prior to screening or crushing is necessary to prevent equipment damage. The grizzly includes features to allow simple bar removal or adjustments, as well as transportability. Each of the screen's 18 bars are installed with two sets of bolts and nuts driven completely through the bar and support. This saves time during bar adjustment or replacement. The self-cleaning grizzly bars rest on an angle to create a diamond shape and tapered openings to eliminate material becoming stuck between bars. In addition, the grizzly is constructed with standard "D" ring lift lugs for ease of transportation and positioning.
