

PITBULL

# PB106 STATIC GRIZZLY

The perfect economical solution to removing large debris before final screening.

**Our PB106 stands 7 feet at its highest point and can stand up to the toughest material, from coarse gravel to demolition debris.**

Our PB106 Grizzly comes standard with 24 bars set at 2-1/2" apart. Just like our PB148, two retaining clamps lock in each bar, facilitating their easy removal or addition in minutes for a larger or smaller opening. Our bars are set on edge to promote a self-cleaning action, appearing as a diamond-shaped bar minimizing the probability of material lodging between bars.
